

Intelligent Asset Tracking

Total control of your tenders and toys. Peace of mind with simplified tracking, protecting vessel, guest and reputation.

Supercharge your two-way radio

Intelligent Asset Tracking Benefits

- **Discrete tracking** – of assets, family and friends through a digitally-encrypted communication system.
- **Information everywhere** – view tracking data on-board via a web browser on any network enabled device. Crew now have the freedom to roam with real-time mapping information and alerts wherever they are.
- **More efficient use of hardware** – one system more functionality and reduced maintenance costs.

Intelligent tracking of your tenders and toys, all using your on-board digital radio system.

Developed exclusively for the luxury marine market **VesselWatch** offers a series of tracking and monitoring solutions, to warn of adverse changes to vessel or personal situation. Designed to keep crew, guests and tenders safe, plus ultimately saving lives.

Utilising the radio infrastructure, see at a glance where tenders and toys are and whether they're on-line or off-line. Set Geo-Fenced perimeters around chosen areas, create reef alerts and safe zones.

Tender Track

Receive an alert the minute your tender-on-tow moves out of range, allowing immediate corrective action to be taken.

Geo-Fence Alert

Intelligent alerts to inform crew radios when vehicle or tender goes beyond the designated perimeter or enters a predetermined safe zone.

Harbour Speed Alert

Assign a maximum speed and **VesselWatch** automatically alerts the radio if it is exceeded – avoiding potential speeding fines.

Never miss an alert. Intelligent three stage escalation plan

Automatically sent to the primary group, no response, the alarm message will then be sent to the backup group. Still no response, the alert can be sent to all radios or via SMS.

Real time tracking information, anywhere anytime

The flexibility to track your tenders from all networked systems, anywhere onboard.

Discreet Dynamic Mapping

Networked mapping server, providing pre-loaded, off-line mapping to ensure the privacy and safety of tenders and guests.

Swift Emergency Response

Using the radio emergency call button, **VesselWatch** immediately alerts the main vessel and crew, plus most importantly providing location details to facilitate a quick response.

Expertise you can trust

We are communications experts, a team of designers and engineers with a passion for creating systems that make your life easier.

Developers of the first wireless BNWAS system, we have over 3500 solutions improving safety and efficiency on vessels worldwide.

With over 15 years experience in the luxury marine industry, you can be reassured that we have the knowledge to fully understand and service your needs.
